

QUICK-CRATE®

greenest
~~The tightest~~ box in the business

Green, Reusable Shipping Crates

Fuel Savings

Since Quick-Crates collapse flat, many more crates can be shipped in one truck, rail

car or sea container, reducing fuel cost and greenhouse gas emission per crate. This also allows crates to travel at a NMFC freight class 50 which reduces freight charges.

Reusable

Quick-Crates are designed to be used many times versus traditional crates, which are used only once and then discarded. Our crates minimize impact on landfills, as well as eliminate disposal costs.

Environmentally

Friendly

Crates are made of all natural materials. All plywood is harvested from managed forests, a renewable resource.

Infestation Prevention

Quick-Crates are made from plywood and OSB, which are exempt materials from ISPM-15 regulations. This prevents bug infestation that is common in solid wood crating and pallets.

ISPM-15
Compliant
